SHRUSHTI WAGHMARE

AI Engineer | Software Developer

Pune, Maharashtra | +91 8087951000 | waghmareshrushti26@gmail.com | Portfolio | GitHub | LinkedIn

SUMMARY

Recent Information Technology graduate (CGPA 8.37, 9.1 in final semester) from I²IT Pune, seeking an AI Engineer / Software Development Engineer role. Comfortable across the stack: React.js and clean UI on the front end, Node.js/Express/FastAPI and relational + document databases on the backend, with a full-stack internship and projects that integrate LLMs and ML models (Hisaab, KrushiSaathi). Currently sharpening Data Structures & Algorithms and system-design fundamentals.

TECHNICAL SKILLS

AI & LLMs: LLM Integration, RAG, LangChain, Groq API, Hugging Face Transformers, Embeddings, Hybrid Search

Programming Languages: Python, C++, JavaScript

Backend Development: FastAPI, Node.js, Express.js, REST APIs

Frontend Development: React.js, HTML, CSS

Databases: PostgreSQL, pgvector, Supabase, MongoDB, MySQL

Software Engineering: Data Structures & Algorithms, OOPs, DBMS, API Integration, Git, GitHub

Tools: VS Code, Jupyter Notebook, Postman

EXPERIENCE

Web Development Intern | TEXVO Developers *Feb 2025 – Apr 2025*

- Developed full-stack web application features using React.js, Node.js, and MySQL, delivering client-facing functionality within Agile development cycles.
- Implemented REST APIs, database operations, and frontend integrations while debugging application issues and optimizing SQL queries.

PROJECTS

Hisaab - Financial Document Analysis Demo | Github

Python, FastAPI, LangChain, pgvector, Groq, React

- Built a full-stack app where users upload financial PDFs (GST invoices, Form 16, balance sheets, annual reports) and get answers with (file, page N) citations, answering only from the uploaded document.
- Extended an open-source FastAPI + React base with document-type detection, GSTIN/TAN/financial-year extraction, and finance-aware chunking that keeps tables together.
- Implemented hybrid retrieval (pgvector cosine + BM25, merged with Reciprocal Rank Fusion) with BGE-small embeddings.
- Added an LRU answer cache with a 24-hour TTL, keyed so that re-uploading a document or editing the prompt never serves stale answers.

AI Resume Analyzer Demo | Github

Python, NLP, TF-IDF, Streamlit

- Developed an intelligent resume analysis system that evaluated candidate-job fit using NLP techniques and generated actionable matching insights.
- Built an end-to-end document-processing workflow including text extraction, vectorization, semantic similarity scoring, and real-time feedback delivery.

KrushiSaathi — AI-Based Farmer Assistance Platform Github

React.js, Node.js, Python, FastAPI, MongoDB, MySQL, LLM

- Developed an AI-powered agricultural assistance platform combining conversational LLM support, fertilizer recommendation, and crop-disease diagnosis within a unified workflow.
- Built FastAPI services enabling the AI assistant to access prediction models and deliver context-aware recommendations based on user queries and model outputs.

EDUCATION

B.E. in Information Technology, I²IT Pune (SPPU) -- CGPA: 8.95 *2022 – 2026*

CERTIFICATIONS

- AWS Academy Data Engineering — Amazon Web Services (Mar 2025)
- AWS Academy Cloud Foundations — Amazon Web Services (Mar 2025)
- SQL (Intermediate) — HackerRank (Aug 2025)

LEADERSHIP & EXTRACURRICULARS

- **Co-Secretary, ACM Student Chapter, I²IT —** organized 3+ technical workshops and coding events for 100+ attendees; coordinated speaker outreach, logistics, and cross-team communication.
- **Event Manager, ITSA Committee, I²IT —** planned and executed college-level technical fests and seminars; managed cross-functional teams and end-to-end event logistics.
